

PRODUCT BENEFITS

Scanfill Foil is composed of a polymer and mineral mix. The environmental impact of the minerals is very low, which makes the total environmental footprint much lower. The minerals also add an exclusive soft-touch.

The polymer part can be made from renewable resources, Scanfill Bio Foil, and has by far the lowest environmental impact.

The Scanfill materials offers additional savings by increasing the production speed and making the energy consumption more efficient. All this because of the thermal properties of the mineral content.

”

THE TOTAL
ENVIRONMENTAL
IMPACT IS LESS WITH
SCANFILL FOIL

WHY?

Green profile goals,
because we care.
Stronger, faster, greener.

AHAA!

Meet your future
environmental goals today
with the Scanfill concept.

FUTURE...

More resource efficient
packaging material
- the right material for
the right reason.

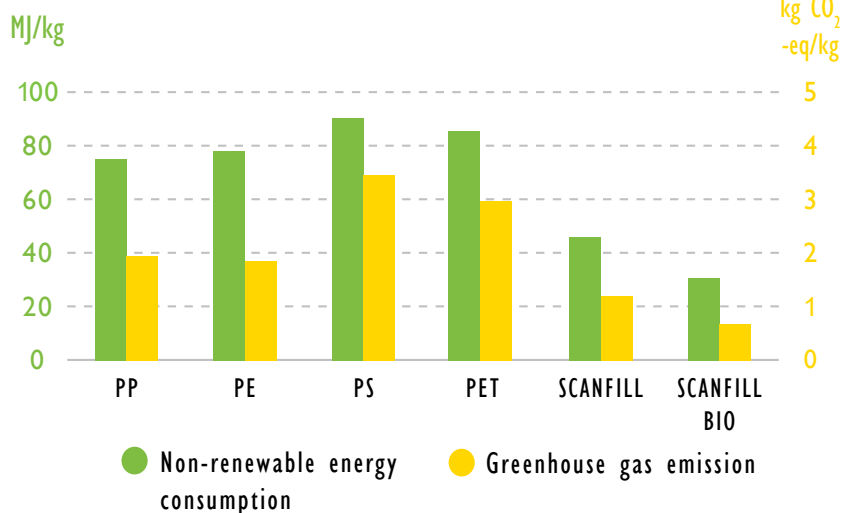

ON SPOT!

The flexible supplier that
customize according to
your demands.
