

Environmental policy

Polykemi Group is committed to developing and manufacturing / marketing different types of sustainable and environmentally plastic materials, to reduce the company's environmental impact and to use energy and resources efficiently under the plastic life cycle.

Our environmental management work is systematically applied into the company and employees by using a process-oriented business system. The purpose of this approach is to continuously reduce and monitor the company's environmental impact.

To show respect to the environment is for Polykemi Group more than just comply with laws and regulations, which we believe to be obvious.

Polykemi Group's environmental objectives, which applicable to all companies, are:

- Strive to develop its own product (plastic raw materials) so that a larger proportion coming from either recycled material or different renewable sources.
- Strive to reduce climate impact, reduce energy and water consumption in our process / manufacturing.
- Strive to reduce the use of chemical substances that are regulated in the legislation and its regulations, and the use of materials with low environmental impact during their entire life cycle.
- Strive to reduce waste amount and contribute to recycling and resource efficiency.
- Strive to choose the best logo transport logistic to reduce CO2 emissions for our external transports
